

Assembly is a "snap"...

The tubular posts with rolled circular grooves at 1 inch increments are clearly numbered to make assembly exceptionally easy, fast, and accurate. No tools are required for assembly or adjustment. The built in tapered corner shelf collar mates perfectly with the interlocking clip. Mating rib ensures positive shelf positioning.

Steps for assembly

- Select the height of lowest shelf.
- Snap a pair of split clips into the grooves of each post at desired height.
- Place shelf on side and slide four posts through collars of shelf.
Note: As shelf load increases, locking action of the clips increases in strength.
- Stand unit upright and tap shelves down in all four corners until firmly seated.
- Repeat procedure for each additional shelf.
